Platinum Dispersion has many applications such as its wear- and tarnish-resistance characteristics are well-suited for making fine jewellery. The glass industry utilizes platinum dispersion for optical fibers and liquid crystal display glass, especially for laptops.

- Good preservative material for food storage
- Fuel cell
- Photo-catalysts
- Medical industry
- Cosmetics

Properties
- Low viscosity
- Antimicrobial
- High surface area
- Thermal stability
- Highly active catalysts

Quick Facts
- Purity: 99.99%
- APS: 15-20nm
- Concentration: Customer requirement
- Dispersing Agent: Organic Solvent (DMF), IPA, Ethanol, Water (ddH2O)
- Form: Slurry, Suspension, Dispersion, Colloidal
