

# SODIUM

## CARBONATE Nanoparticles

Sodium carbonate is an inorganic chemical compound. Sodium carbonate is what is commonly known as Soda ash. Soda ash is extracted from trona. Trona is a double salt containing sodium carbonate and sodium hydrogen carbonate formed as a result of the series of evaporation processes taking place at lakes. Sodium carbonate often called washing soda or soda ash is the most important of all basic heavy chemicals. Its great advantage over sodium hydroxide is that it is no-corrosive and is, therefore, safer to handle.

### Quick Facts

Product	: Sodium Carbonate Nanoparticles
Stock No	: NS6130-12-000985
CAS	: 497-19-8
Color	: White/colorless
Form	: Powder

### TECHNICAL Specification

APS	: 80-100nm
Purity	: <99%
Molecular Weight	: 105.98g/mol
Density	: 2.54g/cm <sup>3</sup>
Melting Point	: 851°C
