Zinc Nanoparticles Dispersion exhibit antibacterial, anti-corrosive, antifungal and UV filtering properties. Zinc oxide (ZnO) dispersions are a versatile material which find applications in sunscreens, sunblocks, paint, preservation, piezoelectric thin films, thin film waveguides, etc. Zinc oxide’s electronic band structure allows the material to block or absorb harmful UV radiation. ZnO can thus find potential applications as a transparent electro-optic substrate.

Quick Facts

- **Purity**: 99.9%
- **APS**: 50nm
- **Concentration**: Customer requirement
- **Dispersing Agent**: Organic Solvent (DMF), IPA, Ethanol, Water (ddH2O)
- **Form**: Slurry, Suspension, Dispersion, Colloidal

Properties

- Anti-corrosion
- Unique anti-microbial
- Self lubricant
- Catalysts

Applications

- Anti-fungicides (agricultural pathogens)
- Widely used in anti-corrosion coatings (galvanization on steel)
- Electrical and hardware industry
- Gamma ray detectors
- Rocket propellants
- Anti-wear, anti-fouling agents etc.

ISO 9001:2015 CERTIFIED COMPANY
